The global energy transition will require \$5 trillion in investment each year between now and 2030 [1] This has created enormous opportunity for

We would like to show you a description here but the site won't allow us.

We're delivering a new hybrid solar and battery system for the remote community of Blackstone (Papulankutja), eliminating the use of high-cost, temporary diesel generation. This pilot project ...

The government of the Democratic Republic of Congo has announced plans for a 600 MW solar park for Menkao in the municipality of Maluku, 25km

Sun Plus, a unit of The Sandi Group (TSG), has launched construction work on a 600-MWp solar plant in the Democratic Republic of

The plant is expected to generate approximately 300,000 MWh of clean energy each year. While many mining operations have adopted solar PV

The installation is designed to deliver power throughout the day and night, offering a new model for mines and other high-demand users in remote

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are

However, due to the increasing efficiency of solar PV and the declining cost of BESS components, a renewable baseload system is now viable and cheaper than the diesel generators

Blackstone helps store and deliver clean renewable energy through the use of solar panels in future and

ongoing development projects.

President Félix-Antoine Tshisekedi Tshilombo has laid the foundation stone for a vast, 1 GW Kinshasa Solar City photovoltaic project aimed at

Kolwezi, The Democratic Republic of Congo -- Kamo Copper S.A. and CrossBoundary Energy have signed a power purchase agreement (PPA) to provide baseload renewable energy to

A long-term power purchase agreement has already been executed between the solar farm developers/owners and SNEL. The power station will provide an estimated 250 GWh of clean energy

The renewable energy project at the Kamo-Kakula Copper Complex in the Democratic Republic of the Congo has reached approximately 70% completion as of February 2026, marking a

Construction of the renewable energy facility is due to start in August 2025. Once complete, CrossBoundary will own and operate the plant, and Kamo Copper
